

# 6 Questions to Ask on Your Journey to NFV

## 1 IS MY ORGANIZATION READY FOR NFV?

Focusing on service delivery and proactive detection of issues is critical to your network, revenue and customer satisfaction. NFV success will take everyone working together.

## 2 DO I HAVE VISIBILITY TO MY VIRTUAL NETWORK ELEMENTS?

The dynamic nature of NFV can make visibility a challenge. Knowing the location of these elements is essential to troubleshooting issues.

## 3 HOW DO I CHOOSE THE RIGHT PARTNER?

NFV will draw a host of new vendors, many without carrier-grade products or experience. You don't want to be a Systems Integrator, you just want all your tools to work together.

## 4 IS MY MONITORING SYSTEM FLEXIBLE ENOUGH TO SUPPORT NFV?

Your monitoring system must dynamically respond to changes in your network and be scalable enough to meet your future needs.

## 5 DO I HAVE THE RIGHT TROUBLESHOOTING TOOLS?

Entrusting your network's performance to unproven tools is risky. You want troubleshooting applications that work together, because your team simply doesn't have time to continually learn new tools.

## 6 HOW CAN I PROTECT MY BRAND DURING THE NFV TRANSITION?

Customers just want their services to work and you want to provide a seamless experience. How you deal with the NFV transition can make or break your brand.

Wherever you are on the journey to NFV, we can help you find the answers.
